`lang.support.en`*Language support for English*

Description

This function adds support for English to the koRpus package. You should not need to call it manually, as that is done automatically when this package is loaded.

Usage

```
lang.support.en()
```

Details

In particular, this function adds the following:

- `lang`: The additional language "en" to be used with `koRpus`
- `treetag`: The additional preset "en", implemented according to the respective `TreeTagger[1]` script
- `POS tags`: An additional set of tags, implemented using the documentation for the corresponding `TreeTagger` parameter set[2]

To also be able to use hyphenation, the package `syllly.en` needs to exist and be loaded.

[2] <http://www.cis.uni-muenchen.de/~schmid/tools/TreeTagger/data/Penn-Treebank-Tagset.pdf>

Examples

```
## Not run:  
lang.support.en()  
  
## End(Not run)
```
