`lang.support.pt`*Language support for Portuguese*

Description

This function adds support for Portuguese to the koRpus package. You should not need to call it manually, as that is done automatically when this package is loaded.

Usage

```
lang.support.pt()
```

Details

In particular, this function adds the following:

- `lang`: The additional language "pt" to be used with `koRpus`
- `treetag`: The additional preset "pt-utf8", implemented according to the respective `TreeTagger[1]` script
- `POS_tags`: An additional set of tags, implemented using the documentation for the corresponding `TreeTagger` parameter set[2]

Hyphenation patterns are provided by means of the `syllly.pt` package.

[2] <http://www.cis.uni-muenchen.de/~schmid/tools/TreeTagger/data/Portuguese-Tagset.html>

Examples

```
## Not run:  
lang.support.pt()  
  
## End(Not run)
```
