`lang.support.fr`   *Language support for French*

Description

This function adds support for French to the koRpus package. You should not need to call it manually, as that is done automatically when this package is loaded.

Usage

```
lang.support.fr()
```

Details

In particular, this function adds the following:

- `lang`: The additional language "fr" to be used with koRpus
- `treetag`: The additional preset "fr", implemented according to the respective TreeTagger[1] script
- `POS tags`: An additional set of tags, implemented using the documentation for the corresponding TreeTagger parameter set[2]

To also be able to use hyphenation, the package sylly.fr needs to exist and be loaded.

[2] http://www.cis.uni-muenchen.de/~schmid/tools/TreeTagger/data/french-tagset.html

Examples

```
## Not run:
lang.support.fr()

## End(Not run)
```
